

Dear David,

We have a few questions regarding the brief for the deliverables of Stage 3:

Question 1

- Point 1 mentions *'If you have updated the use case scenario descriptions, then include a PDF version of those in this archive.'*
- Point 3 mentions *'If you have updated the use case scenario descriptions then they must be submitted as part of the previous item - Evidence.zip.'*

Could you advise where we should submit the updated use cases?

Question 2

- Point 4 mentions *'Java class files are not required'*.

Could you explain how we do this?

Question 3

- Point 4 asks for the *'Java source code fulfilling the requirements of at least the baseline implementation: the Authentication use case diagram.'*
- Under the Authentication and authorisation subheading it states: *'This will mean that you will need to 'mock up' authentication and authorisation procedures.'*

Do we need to implement the authorisation and authentication or just the authentication at the least, and if so, could you expand what you mean by 'mock up'?

Thank you for your time and we gladly await your response.

Kind regards,

Jamie Ghoorbin
