Dear Miles,

We would like to ask some questions about a few points discussed in our recent meeting. The questions discussed were as follows:

RE: LOGIN/PERMISSIONS

From our understanding, it appears that when logging in, you select a level of authorisation/role. The user must log out and log back in to choose a different level/role (Choosing authorisation role when logging on).

- Is this how you want it implemented; When you log in, you pick a role?
- If you become assigned to review an employee, must you log in as a reviewer or will you still log in as a manager/director/etc?
- When you log in, can you pick a reviewer role so that you can read people's past review records and sign off on your reviews?
- If reviewer is a role you can pick, then when you log in as a reviewer, can you see all the records of all the people you are reviewing? Or should you specify which employee you're reviewing when logging in?

For the given scenario, could you answer the question that follows: ManagerA is called on as a second reviewer for EmployeeA and EmployeeB and this manager doesn't usually supervise each of those people. So, when he logs in as manager, he won't be able to read their past review records.

- When he logs in, does he log in as reviewer for EmployeeA or reviewer for EmployeeB?
- Does he pick which one (not ideal) or when he logs in as a reviewer, can he see all of them that he is currently reviewing?

Thank you for your time and we gladly await your response.

Kind regards,

Jamie Ghoorbin
